## PREDGOVOR

„Izvješće o mareografskim mjerjenjima, Jadransko more – istočna obala” izdaje Hrvatski hidrografski institut jedanput godišnje.

U ovom izvješću prikazana su mjerena mareografa u Rovinju, Bakru, Zadru, Pločama, Splitu (u luci i na rtu Marjan) i Dubrovniku.

Vrijedan doprinos u pripremi ove publikacije daju Geofizički zavod Andrije Mohorovičića u Zagrebu i Institut za oceanografiju i ribarstvo u Splitu. Autorsko pravo nad objavljenim podacima pripada ovlaštenim institucijama za mareografe. Publikacija se može reproducirati i/ili koristiti u komercijalne svrhe samo uz prethodno dopuštenje nositelja autorskog prava. Zbog važnosti u međunarodnoj razmjeni publikacija izvješće se objavljuje kao dvojezično izdanje (na hrvatskom i engleskom jeziku).

Sve primjedbe, opažanja i sugestije za unapređenje ove publikacije primit ćemo sa zahvalnošću.

Split, prosinac 2021.

ODGOVORNI UREDNIK

**Srđan Čupić, prof. fizike i politehnikе**

## PREFACE

*“Report on Tide Gauge Measurements, Adriatic Sea – East Coast” is published annually by the Hydrographic Institute of the Republic of Croatia, Split.*

*This report presents tide gauge measurements at Rovinj, Bakar, Zadar, Ploče, Split (harbour and Rt Marjan), and Dubrovnik.*

*Valuable contribution in preparing this publication is made by the Andrija Mohorovičić Geophysical Institute in Zagreb and the Institute of Oceanography and Fisheries in Split. Copyright of the material in this publication is owned by the tide gauge authorities. Permission for its reproduction and/or commercial use must be obtained from the owner. The report is published as a bilingual edition (in Croatian and English) because of its importance in the international exchange of publications.*

*All remarks, observations and suggestions for improvement of this publication would be appreciated.*

*Split, December 2021*

MANAGING EDITOR

**Srđan Čupić, B.Sc.**

## Sadržaj tablica

Mareografska mjerenja prikazana su u pet tablica. Sve vrijednosti visine razine mora izražene su u centimetrima u odnosu na zamišljenu ravninu (mareografsku nulu) koja je uronjena toliko da do nje ne dosežu ni najniže vode.

**Tablica I.** sadržava vremena nastupa te vrijednosti visina visokih i niskih voda za svaki dan u mjesecu i za sve mjesecce u godini.

**Tablica II.** sadržava srednje mjesečne i godišnje vrijednosti visokih i niskih voda, viših visokih i nižih niskih voda, najviše visoke i najniže niske vode za svaki mjesec u godini te raspone odgovarajućih visokih i niskih voda odnosno maksimalni raspon između najviše visoke i najniže niske vode tijekom godine.

**Tablica III.** sadržava srednje dnevne i mjesečne vrijednosti visine razine mora i njihov godišnji srednjak. Srednje mjesečne vrijednosti izračunane su iz srednjih dnevnih vrijednosti visina razina mora, a srednje godišnje vrijednosti iz srednjih mjesečnih vrijednosti visine razine mora (kao ponderirani srednjak).

**Tablica IV.** sadržava srednje mjesečne i godišnje vrijednosti visokih i niskih voda za vrijeme živih i neživih morskih mijena, srednje mjesečne i godišnje vrijednosti nižih visokih voda, srednje mjesečne i godišnje vrijednosti viših niskih voda te raspone odgovarajućih visokih i niskih voda odnosno maksimalni raspon između najviše srednje visoke vode za vrijeme živih morskih mijena i najniže niske vode za vrijeme živih morskih mijena vode tijekom godine.

**Tablica V.** sadržava mjesečne ekstreme visine razine mora, godišnji maksimum, minimum i maksimalni raspon, uzimajući u obzir i seše bez obzira na period.

**Napomena:** Veća brojčana vrijednost znači viši vodostaj mora, a manja niži. Satne vrijednosti visokih i niskih voda u tablicama I. i V. odnose se na srednjo-europsko vrijeme (SEV). Svi podaci u tablicama I., II., III. i IV. prikazani su na bazi srednje krivulje, a u tablici V. prema zapisu na mareogramima. Srednja krivulja prikazuje vodostaje u kojima su eliminirani seši s periodom do dva sata.

## Contents of the tables

*Annual report on tide gauge measurements contains five Tables. All sea level heights are given in centimeters, and are expressed relatively to an imaginary plane (tidal datum) immersed so deeply that the lowest water cannot reach it.*

**Table I** contains times and heights of high and low waters for each day of the month and for each month of the year.

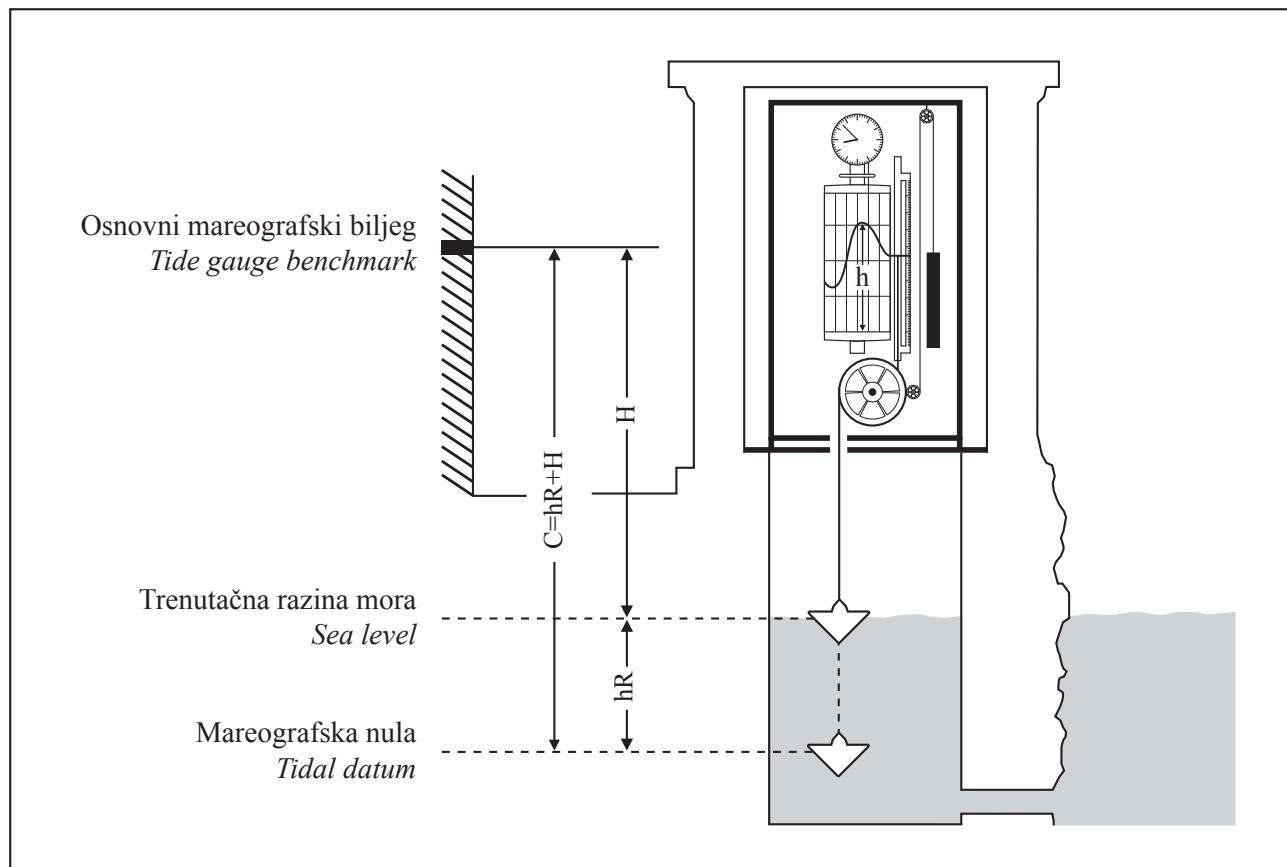

**Table II** contains monthly and annual mean values of the high and low waters, higher high and lower low waters, the highest high and the lowest low waters for each month of the year, and their ranges, as well as maximum range over a year.

**Table III** contains daily, monthly and annual mean heights of sea level. Monthly mean values are computed from daily mean values, and annual mean values from monthly mean values (weighted).

**Table IV** contains monthly and annual mean values of the high and low waters during spring and neap tides, monthly and annual mean values of the higher low and lower high waters and their corresponding ranges, as well as maximum range between the Mean High Water Springs and Mean Low Water Springs over a year.

**Table V** contains monthly extremes of sea level heights, annual maximum, annual minimum and maximum range over a year; considering all seiches of all periods.

**Note:** Higher numerical values represent higher sea level, lower values mean lower sea level. Hourly values in Tables I and V refer to Central European Time (CET). All data in Tables I, II, III and IV are based on the mean curve, and those in Table V on the tide gauge records. The mean curve shows sea level heights where seiches with a period under two hours are eliminated.

**Primjer:** Pretpostavimo da u tablici I. za mareograf u Rovinju vrijednost visoke vode iznosi 118 cm, što znači da se razina mora za tu vrijednost nalazi iznad mareografske nule. Ako se ta vrijednost odbije od mareografske konstante, koja za navedenu postaju iznosi 582 cm, dobije se 464 cm, što znači da se razina mora nalazi 464 cm ispod osnovnog mareografskog biljega. Na isti se način mogu odrediti položaji svih razina mora iz tablica I., II., III., IV. i V.

**Example:** Let us assume that in Table I the High Water value for Rovinj tide gauge is 118 cm, which means that the sea level is 118 cm above tidal datum. Subtraction of this value from the tide gauge constant, which is 582 cm for the above station, gives 464 cm, which means that the sea level is 464 cm below the tide gauge benchmark. Positions of all sea levels can be determined in the same way from Tables I, II, III, IV, and V.

---

## **ROVINJ**

( $\varphi=45^{\circ}05,0'N$   $\lambda=13^{\circ}37,7'E$ )

Mareograf Hrvatskog hidrografskog instituta u Splitu; sustav A. Ott, Kempten; odnos registriranja 1 : 5; smješten južno od svjetla na rtu Sv. Eufemija.

Mareografska nula je 582,0 cm ispod osnovnog mareografskog biljega (nulti indeks na mareografu).

Mareograf u Rovinju radi od ožujka 1955.

---

*Tide gauge of the Hydrographic Institute of the Republic of Croatia, Split; system A. Ott, Kempten; recording ratio 1 : 5; located at Rt Sv. Eufemija.*

*Tidal datum at 582.0 cm below the tide gauge benchmark.*

*In operation since March 1955.*

## SPLIT-MARJAN

( $\varphi=43^{\circ}30,5'N$   $\lambda=16^{\circ}23,5'E$ )

Mareograf Instituta za oceanografiju i ribarstvo u Splitu; sustav Otto A. Ganser, Beč (do 1. srpnja 1985.), A. Ott, Kempten (od 2. srpnja 1985.); odnos registriranja 1 : 5; smješten na zapadnom lukobranu lučice Instituta.

Mareografska nula je 335,1 cm ispod visinskog biljega na postolju mareografa. Visinski biljeg nalazi se 424,5 cm ispod osnovnog mareografskog biljega PN 1313 smještenog na pročelju zgrade Instituta za oceanografiju i ribarstvo.

Mareograf u Splitu na rtu Marjan radi od svibnja 1952.

Od 2011. godine podaci su prikupljeni digitalnim mareografiom tipa A. Ott Thalimedes.

Zbog problema u radu i baždarenju splitskog mareografa na rtu Marjan tijekom 2017. godine, podaci nisu pripremljeni na vrijeme za uvrštavanje u ovu publikaciju.

Ti podaci mogu se zatražiti izravno od Instituta za oceanografiju i ribarstvo.

*Tide gauge of the Institute of Oceanography and Fisheries, Split; system Otto. A. Ganser, Wien (until 1985), A. Ott, Kempten (from 1985); recording ratio 1 : 5. Instrument is located on the break-water of the Institute's marina.*

*Tidal datum at 335.1 cm below contact point, built on the instrument. Contact point is positioned 424.5 cm below tide gauge benchmark PN 1313 walled on the Institute of Oceanography and Fisheries building.*

*Tide gauge operates at Split-Marjan from May 1952.*

*From 2011 data are collected by digital A. Ott Thalimedes tide gauge.*

*Due to the problems in operation and calibration of tide gauge Split-Marjan during 2017, the data were not prepared on time for inclusion in this publication.*

*These data may be requested directly from the Institute of Oceanography and Fisheries.*

**NAPOMENA:** Mjesečeve mijene navedene su prema srednjoeuropskom vremenu (SEV = UTC + 1 h). Kad se primjenjuje ljetno računanje vremena, treba dodati jedan sat.

**NOTE:** Phases of the Moon are given in Central European Time (CET = UTC + 1 h). When Summer Time is being kept, one hour should be added.
